THE ATLANTIC

THE ATLANTIC OCEAN

The Atlantic Ocean is the second largest of the world's oceans, covering an area of approximately 106,460,000 square kilometers (41,104,670 square miles). It is bounded by North America to the west, South America to the south, Europe and Africa to the east, and the Arctic Ocean to the north. The Atlantic is a major center of world trade and commerce, and it plays a vital role in the global climate system. The ocean's currents, such as the Gulf Stream, help regulate the Earth's temperature. The Atlantic is also home to a diverse range of marine life, including fish, whales, and various types of coral reefs. The ocean's depths are still largely unexplored, and scientists continue to discover new species and resources. The Atlantic is a source of many of the world's most important minerals, including oil, natural gas, and various types of metals. The ocean is also a source of food, with many of the world's largest fishing fleets operating in its waters. The Atlantic is a vital part of our world, and it is important that we continue to study and protect it.
